## BLOCKCHAIN POSITION PAPER

## LEGAL DISCLAIMER

*This paper is for information purposes only and may be subject to change.*

Aenco Solutions Limited ("Aenco") cannot guarantee the accuracy of the statements made or conclusions reached in this paper. Aenco does not make and expressly disclaims all representations and warranties (whether express or implied by statute or otherwise) whatsoever, including but not limited to: any representations or warranties relating to merchantability, fitness for a particular purpose, description, suitability or non-infringement; that the contents of this document are accurate and free from any errors; and that such contents do not infringe any third party rights.

Aenco shall have no liability or damages of any kind arising out of the use, reference to or reliance on the contents of this paper. This paper may contain references to third-party data and industry publications. As far as Aenco is aware, the information reproduced in this paper is accurate and that its estimates and assumptions are reasonable. However, there are no assurances as to the accuracy or completeness of this information.

Although information and data reproduced in this paper are believed to have been obtained from reliable sources, we have not independently verified any of the information or data from third party sources referred to in this paper or ascertained the underlying assumptions relied upon by such sources. As of the date of publication of this paper, Aenco is not aware of any potential uses outside of the Aenco Ecosystem and are currently not permitted to be sold or otherwise traded on third-party exchanges.

This paper does not constitute advice nor a recommendation by Aenco, its officers, directors, manager, employees, agents, advisors, or consultants, or any other person to any recipient of this paper on the merits of participation in the Aenco Token Sale. Participation in the Aenco Token Sale carries substantial risk that could lead to a loss of all or a substantial portion of funds used to purchase the Token.

No promises of future performance or value are or will be made with respect to Tokens, including no promise of inherent value, no promise of continuing payments, and no guarantee that AEN Tokens will hold any particular value. Unless prospective participants fully understand and accept the nature of Aenco's proposed business and the potential

risks inherent in AEN Tokens, they should not participate in the Aenco Token Sale.

AEN Tokens are not being structured or sold as securities. AEN Tokens are not a participation in Aenco and AEN Tokens hold no rights in Aenco. AEN Tokens are sold with an intended future functionality on and access to the platform to be developed by Aenco and all proceeds received during the Token Sale may be spent freely, by Aenco.

This paper does not constitute a prospectus or offering document and is not an offer to sell, nor the solicitation of an offer to buy any investment or financial instrument in any jurisdiction. AEN Tokens should not be acquired for speculative or investment purposes with the expectation of making an investment return. No regulatory authority has examined or approved any of the information set out in this paper. No such action has been or will be taken under the laws, regulatory requirements or rules of any jurisdiction. The publication, distribution, or dissemination of this paper does not imply that applicable laws, regulatory requirements or rules have been complied with. AEN Tokens could be impacted by regulatory action and changes, including potential restrictions on the ownership, use, or possession of such tokens. Regulators or other competent authorities may demand that AEN Tokens revises the mechanics and functionality of AEN Tokens to comply with regulatory requirements or other governmental or business obligations. Nevertheless, Aenco believe they have taken commercially reasonable steps to ensure that its planned mechanics are proper and in compliance with currently considered regulations.

Aenco is in the process of undertaking further legal and regulatory analysis of the functionality and mechanics of AEN Tokens. Following the conclusion of this analysis, we may be required to amend the functionality of AEN Tokens in order to ensure compliance with any legal or regulatory obligations that apply to us. We shall update this paper and publish a notice on our website in the event that any changes are made to the AEN Token.

### CAUTION REGARDING FORWARD-LOOKING STATEMENTS

This paper contains forward-looking statements or information (collectively "forward-looking statements") that relate to Aenco's current expectations and views of future events. In some cases, these forward-looking statements can be identified by words or phrases such as "may", "will", "expect", "anticipate", "aim", "estimate", "intend", "plan", "seek", "believe", "potential", "continue", "is/are likely to" or the negative of these terms, or other similar expressions intended to identify forward-looking statements.

Aenco has based these forward-looking statements on its current expectations and projections about future events that it believes may affect its financial condition, results of operations, business strategy, financial needs, or the results of the token sale or the value or price stability of AEN Tokens.

In addition to statements relating to the matters set out here, this

paper contains forward-looking statements related to Aenco's proposed operating model. The model speaks to its objectives only, and is not a forecast, projection or prediction of future results of operations. Forward-looking statements are based on certain assumptions and analysis made by Aenco in light of its experience and perception of historical trends, current conditions and expected future developments and other factors it believes are appropriate, and are subject to risks and uncertainties. Although the forward-looking statements contained in this paper are based upon what Aenco believes are reasonable assumptions, these risks, uncertainties, assumptions, and other factors could cause Aenco's actual results, performance, achievements, and experience to differ materially from its expectations which are expressed, implied, or perceived in forward-looking statements. Given such risks, prospective participants in this token sale should not place undue reliance on these forward-looking statements.

## IMPORTANT INFORMATION:

Nationals or residents of the following countries are NOT eligible to participate in the subscription of AEN Tokens ("Token Sale"):

- 1) United States of America;
- 2) The People's Republic of China;
- 3) Samoa;
- 4) Any sanctioned countries as depicted within:  
<https://www.treasury.gov/resource-center/sanctions/Programs/Pages/Programs.aspx>; or
- 5) Hong Kong (except for "professional investors" , please see below)

Citizens and residents of Hong Kong SAR shall be further required to present "proof of wealth" to demonstrate that they are Professional Investors as defined under the Hong Kong Securities & Futures Ordinance ("SFO") before being eligible to subscribe.

Participants from rest of the world must self-declare to be sophisticated investors in having knowledge on cryptocurrencies, digital assets, token sales, initial coin offerings, blockchain technology, and smart contracts. Any decision to participate in the Token Sale should be based upon your independent assessment. You should obtain independent advice before making a purchase. You must not participate in the Token Sale unless you have read and fully understood these terms and all other relevant materials in particular, the paper and fully understand the purpose and process of AEN, the Platform and the Token Sale. You must monitor the <http://www.aencoin.com> website ("Website") for any announcements that relate to the Token Sale, as they may supplement these terms.

Purchase or possession of AEN does not constitute an ownership interest in Aenco, and carries no rights, express or implied, to receive revenue, shares,

debentures, intellectual property rights, voting rights or any other form of participation in or relating to Aenco or its affiliates.

Neither these terms nor the Paper constitute a prospectus or offering document, or an offer to sell, nor the solicitation of an offer to buy any security, investment, share, financial instrument, or investment advice or equivalent in any jurisdiction. No regulatory authority has examined or approved of the Token Sale or any of the information set out in these terms or other relevant materials.

Please read the Terms and Conditions carefully before using the Website, Aenco's platform or registering your interest in the AEN Token issuance. By agreeing to subscribe to the AEN Token on the page linking to the Terms and Conditions, you accept and agree to be bound by these Terms and Conditions. The full text of the said Terms and Conditions can be found here: <https://www.aencoin.com/assets/docs/aenco-terms-conditions.pdf>. If you have any questions about these terms and conditions please contact us at [moon@aencoin.com](mailto:moon@aencoin.com).

*DO NOT PURCHASE AEN IF YOU ARE NOT AN EXPERT IN DEALING WITH CRYPTOGRAPHIC TOKENS AND BLOCKCHAIN-BASED SOFTWARE SYSTEMS. PRIOR TO PURCHASING AEN, YOU SHOULD CAREFULLY CONSIDER THE TERMS LISTED BELOW AND, TO THE EXTENT NECESSARY, CONSULT AN APPROPRIATE LAWYER, ACCOUNTANT, OR TAX PROFESSIONAL. IF ANY OF THE FOLLOWING TERMS ARE UNACCEPTABLE TO YOU, YOU SHOULD NOT PURCHASE AEN. PURCHASES OF AEN SHOULD BE UNDERTAKEN ONLY BY INDIVIDUALS, ENTITIES, OR COMPANIES THAT HAVE SIGNIFICANT EXPERIENCE WITH, AND UNDERSTANDING OF, THE USAGE AND INTRICACIES OF CRYPTOGRAPHIC TOKENS, INCLUDING ETHEREUM TOKENS, AND BLOCKCHAIN BASED SOFTWARE SYSTEMS. PURCHASERS SHOULD HAVE A FUNCTIONAL UNDERSTANDING OF STORAGE AND TRANSMISSION MECHANISMS ASSOCIATED WITH OTHER CRYPTOGRAPHIC TOKENS. WHILE THE COMPANY WILL BE AVAILABLE TO ASSIST PURCHASERS OF AEN DURING THE SALE, THE COMPANY WILL NOT BE RESPONSIBLE IN ANY WAY FOR LOSS OF BTC, ETH OR AEN RESULTING FROM ACTIONS TAKEN BY, OR OMITTED BY PURCHASERS. IF YOU DO NOT HAVE SUCH EXPERIENCE OR EXPERTISE, THEN YOU SHOULD NOT PURCHASE AEN OR PARTICIPATE IN THE SALE OF AEN. YOUR PARTICIPATION IN AEN SALE IS DEEMED TO BE YOUR UNDERTAKING THAT YOU SATISFY THE REQUIREMENTS MENTIONED IN THIS PARAGRAPH.*

## 1. Executive Summary

Blockchain, built upon the consensus based distributed ledger system, is going through rapid evolutions. At the point of writing this paper, there are already murmurs in the market talking about blockchain 3.x or 4.0 and so forth. One thing for certain is that blockchain will be here to stay and will seem to continue to take over many existing business processes and make possible novel project ideas implementation in real life. In many cases, blockchain has the effect of approaching data security in a new and more secured manner; some other blockchains also bring greater efficiency and transparency to transactions that revolutionising data processing and analytics.

There are now numerous types of community users looking to adopt blockchain based approach to support their desired applications, be it in the field of general business, financial, regulatory and even, in the field of healthcare and medical. Despite the promising nature and the current robust vision of where blockchains will take us in the near future, currently there are still limitation issues with some of the major blockchains that are challenges to the natural evolution process. For example, one technical issue with major blockchains is the “data clogging” issue, as such some current popular blockchains have already reached over 1TB to download! Other issues that need to be addressed include (the lack of) business customisation, friendliness and flexibility to build target applications on blockchains in real life, resulting in often lack of real life business usage of some newer blockchains these days. Other issues, which may become more secondary in nature due to the advancement in blockchain structures relative to Bitcoin and Ethereum, include low transaction speeds, limitations and vulnerabilities of the proof of work mining approach and the less than robust verification methods of new business projects and quality of participants in the mining network.

AENCO is a platform that will support real life business applications, particularly in the field of healthcare and medical technology and financial solutions. Aenco’s end-to-end platform comprises of two core sub-platforms: a) the “Aenco Blockchain” and b) the “Aenco Financial Solutions Application Platform”. In relation to b), Aenco’s financial solutions platform will be a real life use case of the Aenco Blockchain in itself and all the detailed information can be found on our separate paper (<https://www.aencoin.com/assets/docs/aenco-paper.pdf>) and on our website (<https://www.aencoin.com>).

Aenco Blockchain will introduce some exciting algorithmic approaches to address many of the issues highlighted above and the Aenco team will demonstrate the customisable real life business applications within the short term. In fact, at the point of this article, Aenco team has planned four major and impactful application projects in the field of healthcare research, medical services, drug development and healthcare real estate, to be launched from its blockchain all within the next 15 months. This will be in parallel to the announced launch of Aenco Financial Solutions Platform (the IB Solutions, Prime Solutions, Smartcap Solutions), to be supported by the Aenco Blockchain, which will include the launch of its own smart wallet (AEN Connect), support the roll out of v2.0 AEN token (AEN), healthtech centric crypto exchange (AENX), token launcher platform, p2p decentralised collateralised lending system, innovative margin management system, escrow account system, OTC product launcher (etc.). Through these applications, Aenco will demonstrate the robustness of its blockchain, flexibility in its support for business application customisation and the focus of our team in delivering real life usages. Aenco Blockchain will also demonstrate its capacity to service an ever-growing ecosystem and inter-connecting communities through our sharding (Hex), node and API mechanisms.

The Aenco Blockchain will be built upon an existing open source framework using C++ which will deliver a suite of exciting features as follows:

- (i) Industry-competitive transactions rates (currently up to 4,000 Tx/s),
- (ii) Flexible smart contract module,
- (iii) Master (trusted) node program for consistency and stability,
- (iv) A combination of permission based nodes and public based AEN stake leasing mechanism to cater for public growth and energy efficiency maintenance,
- (v) Data Decay Principle: removal of redundant / inactive data on the blockchain over a pre-defined period to reduce “data clogging” issues on blockchain;
- (vi) API gateway and business sharding: easy to use gateway interface to allow businesses to build customisable applications (“individual business shards”) supported by our blockchain;
- (vii) Multi-Mining Model: individual business shards can operate their own mineable token with customisable mining models that suit their business operations;
- (viii) Know-Your-Business Verification: to maintain consistency and integrity of the operating business shards, all such projects will be subject to a KYB of the team background/vision + technical audit process prior to going live;
- (ix) Proof of “iii” consensus algorithm: applies the principles of Integrity (e.g. genuine net transaction recorders), Innovative (e.g. creative community content / transaction contributors), Impactful (e.g. long term staking public AEN token holders) in determining the scores of the nodes, with higher the score higher the probability of successfully mining a block;
- (x) Mining tiers: introduces a tiered mining membership with vesting over a predefined period, ranging from Master-nodes (1,000,000 AEN, permissioned), Gold (500,000 AEN, permissioned), Silver (50,000 AEN, public), Bronze (10,000 AEN, public) and Green (10 AEN, public);
- (xi) “Trinity” Wallet Recovery system: to recover lost wallet or lost private keys to the tokens through a combination of public key and KYC data held on blockchain (requires prior registration).

The Aenco team is extremely excited to deliver to the community and healthtech industry the above exciting features and remains focus always to deliver some real life usages especially in the financial and healthtech industry. We believe in revolutionising much of the historically hard-to-launch but potentially promising healthcare and medical technology projects with the support of blockchain. Many of the anticipated financial utility, healthtech utility and general business utility have been explained in detail in our Aenco platform paper. However, by no means does it end there and we constantly welcome our community and potential business partners to explore with us how our blockchain can support their real life usages.

The Aenco team is comprised of very experienced financial and computational programming background personnel with generous support from our academic advisory and contractor networks in the cryptography space around the world, including (but not limited to) Hong Kong, United Kingdom and Silicon Valley in the United States. In particular, we are extremely thankful to our advisors, some acting in personal capacity, at the University of Hong Kong and the Chinese University of Hong Kong for their unwavering support of this immense project.

## 2. Introduction and Problem Statement

### Introduction

AENCO Blockchain in its more basic form is an eco-system network built on blockchain technology, under which the AENCO Blockchain integrates concepts from other open sourced ledgers such as Ethereum, Bitcoin and industry best practices and due diligence.

Aenco's primary contribution, in particular to the healthtech industry and financial industry, is to bring evolving blockchain technology with major improvements to help promote research collaboration and ultimately improve the quality of our day to day lives. Aenco does this by improving blockchain technology and bringing in solutions that make the eco-system usable, customisable, maintainable, secure and cost effective.

In addition, Aenco Blockchain introduces a Proof of "iii" consensus algorithm (the "i" being integrity, innovative, impactful) in scaling the rewards to genuine AEN token holders and those who make constructive contributions and transactions on our blockchain network.

Our blockchain is evolving and some of the decisions here may change based on transaction findings and community feedback. We will endeavour to keep our community updated along the way!

### Problem Statement

What problem are we trying to solve technically? There are many solutions in the market place, and the question we get asked often is why use your own blockchain? Or why not use "xyz system"? The simple answer is they all try to solve some major problems - scalability, longevity, performance, usability - but while solving those narrow issues, none come close to the unique vision that Aenco requires to have on these blockchains and certainly none that can support the special needs required by healthcare and medical technology projects combined with an all-encompassing financial solutions platform. In addition, these needs are constantly evolving and the community feedback will be a continuous process that will require our blockchain to have the flexibility to upgrade and improve as it takes on support for more projects.

As such, by building our own Aenco Blockchain, we can cherry pick the best approaches and evolve our blockchain technology by introducing innovative concepts during the construction.

Aenco's team has a diverse and open minded ability to think outside the box. We bring ground level user experience into the design and architectural decision making, while at the same time involve levels of participation from advisors, partners, and universities to critically think through the possibilities and pit falls of any approach taken.

Here are some of the identified problems on current public blockchains in the market that we are addressing:

**Zero knowledge participation (Wallets, Interfaces etc.):** the experience of both technical and non-technical users can be mixed and confusing at times due to the lack of understanding, with participation being limited or none;

**Scalability:** Once the usability is solved, the user capacity and data storage requirements will increase significantly, and thus causing most blockchains to collapse under their own success;

**Distributed to a Single Point:** Although blockchain technology based on P2P and distributed techniques are the selling points for security, they mostly suffer from a single controlled entry point for each use case (for example, If crypto-kitties company closed their website, your kitties would be trapped forever in the blockchain with no gateway to access them);

**Isolated smart contract execution:** In currently adopted systems, such as Ethereum, smart contracts are run everywhere at the same time, and even in Proof of Stake, they are still sandboxed and contained. Therefore, in effect they only run code within the ledger and interact only within its own box;

**Immutably for ever:** Most existing systems claim immutability, the problem with this statement is that you can never clean up the ledger, which in the case of over user or very popular system, would size itself out of available storage and bandwidth, making themselves dependent on others to solve the problem such as CPU, memory and bandwidth improvements;

**Sharing securely:** Within certain business industries, such as the healthtech industry, a few main issues continue to cause many practical real life problems. For one issue is privacy - how can an institute make medical data available, but still retain control and deny access at any time without the receiver being able to keep or make a copy of the information? While at the same time, it must ensure the integrity and privacy of the data, but also offer the benefit to the data owner?

**Allow Public Mining on Permissioned Chain:** Public mining allows improved computing power, and participation gives access to latest information, but the information can only be carried out by permissioned entities who may need the public's computing power.

The list above highlights some of the challenges and issues faced, but the solution is not available in any single blockchain use case and often scattered across a number of them, hence we are dedicated to develop our Aenco Blockchain ledger systems, with the objective to provide practical and implementable solutions to these problems.

### 3. Solution Statement

Aenco Blockchain will address each of the problems with its unique algorithmic and design solutions. We have hereby list out a succinct summary of our approaches to each of these problems:

**Zero Knowledge (AEN Connect) Smart Wallet:** aimed at easy user experience and friendly integrated mining / leasing interface, with excellent UI engineers and designers working closely with a focus group in a tight development cycle;

**Scalability:** a “Side Chain” approach will be adopted alongside the code ledger so that it does not get overloaded, and has the final last word of truth. This will be implemented in conjunction with Immutable objective and business sharding objective below;

**Immutable Forever:** a “Data Decay” algorithm will be implemented at the core, in essence, to support the removal and archiving of inactive or redundant data from the core blockchain after a certain pre-defined period determined by a function of AEN cost spent (for example, a default period of 1 AEN cost = [3] years be defined); such period can be extended with mechanisms such as active and genuine calling of such data by users and/or uses of AEN to purchase further storage time. In other words, this means that all engagement with Aenco Blockchain ledger will have a life cycle, and the creator will need to consider the life of their entry, when an Item has decayed, it will be moved to our side chain for a pre-defined period (i.e. archive nodes). All deleted Items & transactions will still be maintained on our side chain archive nodes, and if such a reactivation is required, then the relevant participants will need to spend AEN to implement the data back in the core blockchain for subsequent usage;

**Liquidity and Trust:** through a delegated Proof of “iii” model, permissioned nodes will be validators and public stake holders can earn rewards by leasing their tokens to remote mining nodes and to account for successfully mining a block collectively; this is further elaborated below:

**Proof of “iii” consensus algorithm and leasing mechanism:** a novel algorithm that introduces a scoring approach to each node on the blockchain network, with higher the score, higher the probability of successfully mining a block. Unlike the usual Proof of Work (PoW) or Proof of Stake (PoS) models, which have their own limitations such as computer power, coin hoarding, or energy consumption, Proof of “iii” applies the principles of Integrity (e.g. genuine net transaction recorders), being Innovative (e.g. creative community content / transaction contributors), and being Impactful (e.g. long term staking public AEN token holders) in determining the scores and probability of such permitted node. In addition, through the leasing mechanism, the public may lease their stakes to such permitted remote nodes to pool the mining power and share the rewards, with just the public keys required (i.e. without needing to disclose the private keys). This brings a number of advantages such as not requiring the computer to be constantly running at all times and that mining rewards will be automatically credited to the smart AEN Connect wallet;

Master-nodes and Mining Tiers: new algorithms will introduce a tiered master nodes model on a combination of permission basis (for senior tiers) and public basis (for junior tiers). Minimum AEN token thresholds are counted based on the tokens being vested over the defined period; however, for transaction spending or transfers perspectives during the vesting period, AEN will be deducted or added on a pro-rata basis between the vested and unvested pot in the wallet. The tier thresholds are currently anticipated to be as below, but this amount is potentially subject to change depending on adoption, token price, and community requests.

MINING TIERS	MINIMUM AEN TOKEN REQUIRED	VESTED PERIOD (DAYS)	PERMISSION / PUBLIC BASIS
Master-nodes	1,000,000 AEN	<b>Over 10 days</b>	Permission + KYC
Gold	500,000 AEN	<b>Over 5 days</b>	Permission + KYC
Silver	50,000 AEN	Over 5 days	Public
Bronze	10,000 AEN	Over 1 day	Public
Green	10 AEN	Over 1 day	Public

**Distributed to a Single Point:** Aenco will have distributed access to all mining nodes from the client applications. Therefore, upon connection, the client will receive a full list of available nodes, thus always being able to choose and connect to the fastest, most rewarding, or nearest available node to our blockchain ledger;

**API Gateway, Business Sharding, Multi-Mining Model:** to cater for flexibility, simplification and friendliness for customising business applications, an API gateway will be implemented to interface applications with the core Aenco Blockchain. Through the API gateway, businesses can build unlimited applications (“business shards”) as well as the launch of its own mineable token (supported by the smart contract module) whose mining mechanism can be customised and supported through the API gateway.

**Isolated Smart Contracts:** In our system we call these “Smart Contract Modules”, and they are targeted execution. For example, if a smart Artificial intelligence module (or business shard) needs to run against certain medical imaging data (such as X-Ray), only those permissioned nodes that have relevant X-Ray data will execute the code. Additionally further in the future, we will implement the ability to break code into “Asynchronous Modules”, where any miner or wallet may execute and return a result.

**Sharing, Secured Remote and Distributed Execution:** allows a data owner to make their data available for analytical purposes (as optional), without releasing the source data or ownership. In addition, the source cannot be copied, removed, or deleted. The owner can grant or remove access rights to his/her data and can even approve outgoing results from the executed smart module. This will be done via a customisable administrative interface that the data owner will use to manage the permission and operation of their gateway.

**Business Shards and Side Chains:** As previously mentioned, the Aenco Blockchain can support customisable business applications and mineable tokens through the “Side Chain” feature. As some business nodes are specific to particular use cases and tiers, to create or to join them, the participants will need to receive a permission key. This is achieved through a Know-Your-Customer (“KYC”) or Know-Your-Business (“KYB”) process where, prior to live implementation, the participant needs to apply for permission from the network. In other words, in order to filter out “bad” nodes or “bad” business shards from infiltrating and unsuitable data to our blockchain, and to maintain consistency of the model, the robust KYC/KYB process (with an inherent technical audit process, involving a scoring approach to take into account the quality of the project individual

or team background, vision, and objectives) is completed prior to being deployed live on our network. Once approved, they can be trusted to do validation, as well as nodes that can accept end users and miners staking their coins and administer the reward sharing program.

**Trinity (KYC) Wallet Recovery Process:** a common issue currently associated with tokens is the risk of losing information absolutely paramount to the safekeeping of digital assets (For example, a loss of private keys to wallets makes recovery of tokens impossible and often lost forever). The Aenco Blockchain together with its AEN Connect SmartWallet will introduce a recovery process called the “Trinity” system. In effect this combines a trio of factors being: (i) A wallet’s public key, (ii) Know-Your-Customer ID, and (iii) User’s personal data such as date of birth or address proof. As a pre-requisite owners must perform standardised KYC procedures and provide personal data to associate the user to the wallet’s public key to enable the backup and recovery of vital information; all of such said information will be held in encryption on the blockchain.

These are some of the simpler explanations of what is being undertaken, and the next section will highlight some of the technical solutions being adopted.

## 4. Summary Features

For the purposes of this paper, we have summarised in the below table some of the key strengths, features, and useful information for the Aenco Blockchain. The blockchain has been developed based on open source ledger frameworks and constantly being improved with Aenco's visions and targets, all designed to make the Aenco Blockchain an extremely user friendly and flexible system for real life business applications, such as the healthtech industry and financial industry. Fuelled by the AEN token, the Aenco Blockchain will be able to support multiple ecosystems and communities (through the business side chains) and unite these various networks within one umbrella.

The below figures are based on the latest approach in our development cycle and internal testing. The final figures and features maybe subject to change as we progress through the testing phase and based on community feedback.

NAME OF TOKEN:	AEN
First version of launch under ICO:	ERC 223 based
Second version of launch under the Aenco Blockchain:	AEN v2.0 Existing AEN (ERC223) will be replaced on a 1:1 basis through the AEN Connect smart wallet. Further implementation of exchange will be announced in due course.
Minimum denomination:	0.00000001
Maximum supply:	4,000,000,000
Reserved for mining:	1,994,000,000 (49.85% of maximum supply)

NAME OF BLOCKCHAIN:	AENCO BLOCKCHAIN
Hash function type:	512 bit SHA3
Programming Language:	C++
Expected transaction rate:	4,000 Tx/s (Further improvements will be planned to further upgrade the transaction speed).
Block Time:	1 minute
Consensus:	Proof of "iii" (scoring approach based on i for integrity, innovation, impactful)
Privacy Capability:	Privacy via the Decay functionality will allow individual implementations to prune transactions and history, in addition the contents of non-fund transfers will be encoded.

Data Decay Principle:	<p>A user pays for the Ledger entry, the decay will tick <math>e^{10}/\text{users per second}</math> per 0.00000001 AEN based on the time elapse of now - created.</p> <p>In turns of simplicity, the more users there are associated to a ledger entry, the slower the decay becomes.</p> <p>At the base line, for example, 1 AEN Coin will last for c. 3.2 years</p>
Smart Contract Module:	Supported
Text Messaging:	Supported; whisper node mechanism
Message Encryption:	Supported; uses a private key signing to enable messaging to be securely delivered and untampered.
Value Transfer:	Supported; To all direct transfer from wallet to wallet of the bases currency.
Multi-signature:	Supported
Smart Wallet:	Supported
Side Chain/Business Shards:	Supported
Mining Tier:	Master-nodes (1,000,000 AEN, permissioned), Gold (500,000 AEN, permissioned), Silver (50,000 AEN, public), Bronze (10,000 AEN, public) and Green (10 AEN, public)
Mining Criteria:	Proof of "iii" + Permission or Public (subject to tiers)
Stake Leasing to remote nodes:	Supported
Accounts:	<p>Elliptic Curve Cryptography</p> <p>Private + Public Ed25519 key pair</p> <p>Accounts identified by Aenco addresses derived from ED25519 public keys</p>
Addresses:	<p>Base-32<sup>3</sup> encoded triplet:</p> <p>Network byte, 160-bit hash of the account's public key, 4 byte checksum</p>
Transactions:	Only confirmed transactions are included in a mined block and updates the ledger account state. Transaction fees can be increased to raise priority of a specific transaction.
Blocks:	<p>Linked blocks with up to 120 tx per block, and as the blocks are stored as a permanent record with implied decay with a birth block. Each block contains the following:</p> <ul style="list-style-type: none"> <li>• Block Version</li> <li>• Block timestamp</li> <li>• Public key of the creator (Mining node)</li> <li>• Block data signature</li> </ul>

Smart Wallet (AEN Connect):	<p>The communication and operation of the end user will always be through the Smart Wallet called AEN Connect (constantly evolving), this will interact directly through an Aenco Blockchain node and present all Aenco chain services and interactions.</p> <p>AEN Connect will be available in the following platforms</p> <ul style="list-style-type: none"> <li>• Web based system available at <a href="https://aencoin.com">https://aencoin.com</a></li> <li>• Mobile Application</li> </ul> <p>Code will be based on 2 layers:</p> <ul style="list-style-type: none"> <li>• User interface Facing layer (Mobile/HTML)</li> <li>• API for back end interaction including blockchain interaction</li> </ul>
Blockchain Core:	<p>Proof of “iii” ledger + decay principles + validation of a trusted node</p> <p>Block securing mechanism by Merkel Tree approach, with a state root mechanism.</p>
KYC/KYB Integration	<p>As part of the ecosystem, KYC signatures will be validated and available for 3rd party approval</p>

## 5. Aenco Blockchain Roadmap

Below is a one year roadmap in relation to the underlying development of the Aenco Blockchain, in parallel to that of the Aenco Financial Solutions Platform described in our paper. As the blockchain develops, further announcements will be made on our website and communication channels, where we will also invite feedback from the community during the testing phase with a generous bounty scheme to follow!
